

**ZINDAGI**  
TECHNOLOGIES

Making the cloud work for you

# ZINDAGI

AT A GLANCE

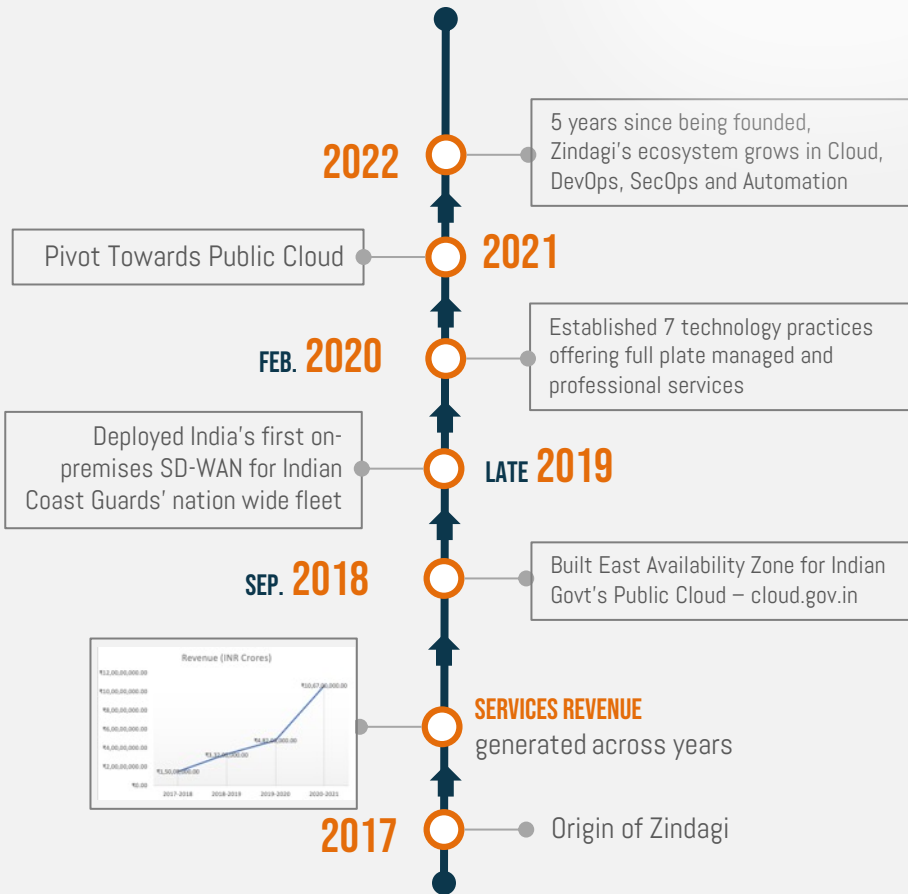

When everything on Cloud is real-time, you need a cloud partner who is agile, precise, innovative and quick with solutions. That's Zindagi for you. Reliable, seamless, secure and just what you need to make Cloud work for you.

# ABOUT ZINDAGI

Zindagi's unique value proposition is complete automation of customer's application integration and deployment in the cloud in a seamless fashion.

## CORE TEAM

**ABHIJIT ANAND**

**FOUNDER AND CEO**

19+ years of experience in covering solution design, strategic planning, technical innovation, product management, pre-sales and technical business development.

**SANA KHAN**

**CLOUD EVANGELIST**

With over 10 years experience in DevOps, Cloud and automation technologies, he has worked in large enterprises. Sana is a certified AWS Solution Architect.

**ADITYA BAHL**

**DELIVERY LEAD**

With 15+ years of experience, he is technically sophisticated, dynamic and a result-oriented Cloud and Information Technology Management Expert.

**PRATAP SINGH**

**BUSINESS DEVELOPMENT**

An astute professional with over 18 years of experience in Direct Sales, Inside Sales, Business Planning and Development, Account Management & Managing Customer Relationships

# WHAT DO WE ENABLE

## CONSULTING IMPLEMENTATION

### CLOUD CONSULTING

A trusted cloud partner with extensive technical capabilities who has all the solutions. Customized for you.

### DEVOPS

Agile and innovative. Your Go-to-Market and response time will be quicker with us.

### IMPLEMENTATION

Whether your cloud is on-premise or off-premise or a hybrid – Security is a key concern. With Zindagi, you have nothing to worry about.

### MANAGED SOLUTIONS

Accelerate deployments, simplify operations and empower business to make more data-driven decisions with end to end managed services.

## WHAT DO WE ENABLE (CONTD.)

### MANAGED SERVICES

#### CONTINUOUS OPTIMISING

Cloud is ever changing, and every business needs to keep optimizing their utilization to ensure the cost is under control.

#### SECURITY

Every cloud based business needs maximum security. It's managed by our team of experts.

#### CONTINUOUS MONITORING

Part of making cloud work for any business is ensuring that there are no blackouts. At Zindagi, that's our goal.

#### 24\*7 SUPPORT

To ensure continuous monitoring, enhanced security, a key ingredient is a team that is always at your beck and call.

## OUR ECOSYSTEM PARTNERS

### AMAZON WEB SERVICES

Professional services for a broad set of global compute, storage, database, analytics, application and deployment services that help organizations move faster, lower IT costs and scale applications.

### ACCOPS

Accops provides an integrated solution for secure access to business applications from home or anywhere else. Empowers remote users with instant access.

### INSTASAFE

**InstaSafe**  
Cloud. Secure. Instant.

Instasafe provides Zero Trust Security products and solutions and SDP security services based on the best quality zero trust security principles.

### MICROSOFT AZURE

We offer professional and managed services across Microsoft Azure compute, identity, mobile, storage, communication services, data management, AI and storage services.

### SONATYPE

Sonatype provides components used in Software Development Lifecycle along with policy automation, ongoing monitoring and proactive alerts to ensure high efficiency and maintain security.

### WEBSCALE

Webscale is a platform and technology independent with a singular purpose to delight customers worldwide through better performance, higher availability, enhanced security, simpler manageability and lower costs.

## SLA

- Defined Response Times & Resolution Times based on the Criticality of Issues
- SLA Penalties applicable and credited in the form of prorated Managed Services monthly charges
- Transparent SLA breach calculations for all exceptional scenarios
- Clearly defined Escalation matrix for Incidents with aging mapped to Escalation Levels
- AWS SLAs as per definitions in [aws.amazon.com](https://aws.amazon.com/sla/)

# Our Expertise

- Cloud Consulting
- Cloud Migration
- Cloud Cost Management
- Cloud Security

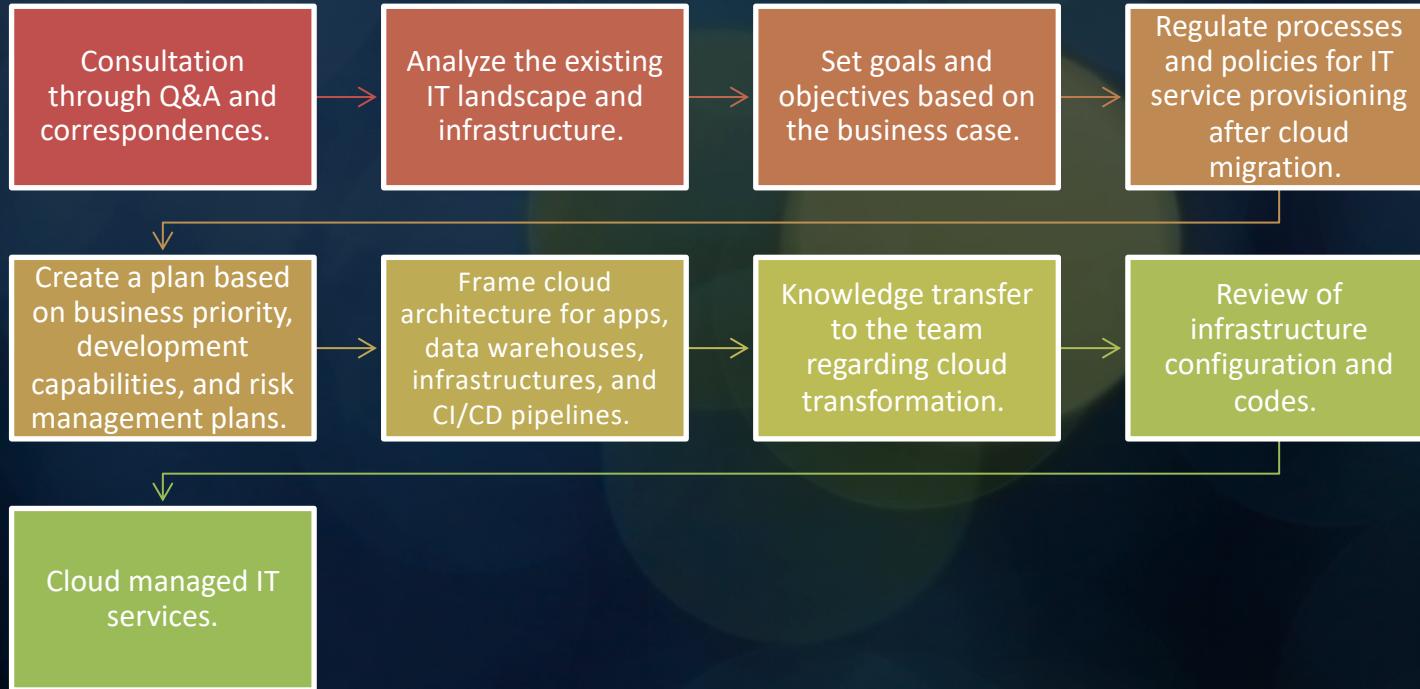

# Cloud Consulting Services

- Our cloud consulting services and strategies reduce the complexities of the cloud allowing you to work with confidence
- Our team of experts delivers highly productive and competent cloud consulting services and strategies that help organizations to be more agile and competitive in their operations
- We help businesses advance and offer all necessary cloud computing services and help maintain their cloud servers, data warehouses, databases, networking, software, and apps.
- Our cloud solutions and strategy will help organizations improve their performance and minimize their IT resource demands, resulting in increased efficiency. It also helps to reduce time-to-market and cut costs.

# Cloud Consulting Process

# Cloud Migration Services

- Cloud Migration is all about your organization migrating data, applications and workloads from a private server or on-premise data center to a cloud architecture.
- Zindagi's cloud migration experts help you identify the best way of arranging and transferring your business service platforms, web and mobile applications, CRM support systems, product software, enterprise databases, and more to the cloud.
- You are assured optimum results in migrating your complex and mission-critical business environments with Zindagi's cloud migration strategies and best practices.
- Our enterprise cloud management framework assists you in accomplishing business goals and dodging difficulties encountered during the transition to the cloud.
- With Zindagi, you can rest assured that your business is tapping into the fullest potential of cloud migration services.

# Cloud Migration Components

## Cloud Migration Analysis

- Cloud migration strategy begins with a data-driven analysis of your cloud migration journey. This analysis includes a detailed prediction of how your infrastructure will look in the cloud. Further, your organization's cloud migration roadmap will be built based on the analysis that evaluates application dependencies and applications' cloud readiness.

## Cloud Security Strategy

- Data security is a big concern for businesses who opt cloud migration services. But with Nuvento, your data is secure through network level and server level security measures. Since data is moved from on-premise to offsite locations, the storage of your data fully complies with industry security standards.

## Cloud Implementation

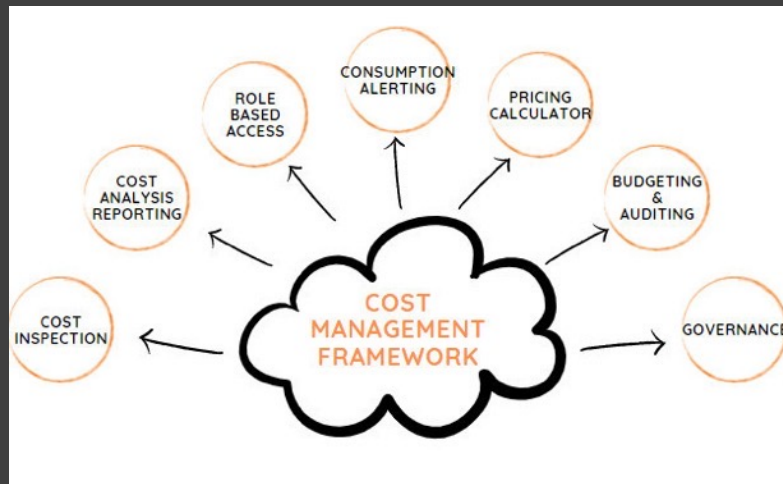

- We take care of your cloud infrastructure design and also look into capacity and storage planning. After working closely with you, we identify the best cloud technologies that can help continue your operations with minimal disruptions.

## Cloud migration monitoring

- Evaluating the performance of applications, platforms and workloads post cloud migration lets you understand the success of your migration. We help you understand how your migrated solutions are performing so necessary changes can be made along the way.

# Cloud Cost Management

- Cloud makes resources and other computing demands available over the internet as per needs. Zindagi's cloud cost management is about tracking these cloud services-linked expenses and maintaining it in line with actual demand.
- We help businesses understand the precise cloud services they are paying for while choosing from SaaS, IaaS, or PaaS for their business.
- With our cloud cost management services, we enable your business with well-organized cloud service usage.
- Our cloud cost management services will list out reasons for cloud spend on applications/infrastructure. Zindagi ensures the practice of cloud cost control by checking cloud infrastructure usage, estimating and decreasing the resources causing cloud spend.
- We make recommendations that would ensure optimal cloud resource utilization.

# Cost Optimization Approach

- **Cloud cost visibility**
  - Accountability and transparency are very important in cloud cost visibility for businesses to stay in budget. This is enabled by maintaining accuracy and time spend on cloud data, particularly for a thorough understanding of multi-cloud spend. Zindagi can enable cloud cost visibility for your business to make fact-centric, well-timed decisions of cloud usage
- **Cloud cost allocation**
  - We help you implement an asset tagging structure for better cloud cost allocation. Initially we frame a clear picture of business assets, tag the assets, and remove/add assets based on the tag status. Through various cloud cost management practices, our team sets financial goals, boosts a cost-conscious culture, and meets financial targets for your business.
- **Cloud cost optimization**
  - Zindagi has best practices to reduce the overall cloud spend by tracking mismanaged and unused resources. Our team will eliminate the identified idle resources, save capacity for higher price cuts, deploy heatmaps for analysing cloud demand, analyse multi-cloud vs. single cloud for business and right-size cloud services for optimizing cloud spend.
- **Cloud governance**
  - Our team creates a comprehensive cloud governance model for optimizing cloud cost. We frame a set of protocols and policies that businesses must follow which can be accomplished through phases like awareness, early adoption, and mature adoption. These policies cover controlling cloud costs, deploying optimal assets, controlling access, increasing efficiency, and cutting cloud security issues.

# Cloud Security

- Safeguard your cloud environments with cloud security managed services.
- Enterprises like yours need a robust and agile cloud security framework in a growing landscape of digital data.
- You must build capabilities to proactively respond to security concerns.
- Zindagi's Cloud Security services can help your business to effectively manage security across your cloud estate, while you concentrate on scaling your business.

# Cloud Security Vulnerabilities

- **Cloud traffic monitoring**
  - Your cloud data can have vulnerabilities, which if unattended to can lead to invasions by unauthorized users. Zindagi's cloud security teams tackle such anomalies with continuous network traffic monitoring.
- **Cloud data control**
  - Robust cloud security architecture restricts cloud access within the cloud support team. We set up rigid data control to safeguard your organizational cloud networks and place it under the control of our IT support team.
- **Cloud data and application access**
  - Your enterprise may not have set permissions and access levels for your data and applications. Zindagi's cloud support team can assist you in fixing permission settings, to decide who can have access to what.
- **Compliance concerns**
  - The extra dimension of complying with the external, internal, and regulatory guidelines has to be contained within the risk management process of cloud security architecture.
- **Cloud-native gaps**
  - Unauthorized data access in a native cloud environment can be stimulated by identifying vulnerabilities, growing access through weak interfaces, and shifting data to illicit storage locations by unauthorized users.
- **Disaster Recovery**
  - The cloud security tools, processes, and policies are to be counted in the DR framework for continuing operations in case of occurrence of unforeseen circumstances.

# Zindagi Cloud Security Solutions

## Visibility

- In business, cloud services are accessed from outside the company network and this can lead to a breach of business data. So, ensuring visibility is what Zindagi does first so that we can have the concrete understanding of
- Data Stored in Cloud
- Users of cloud data and user permissions for accessing data
- Details of shared data
- Cloud data location
- How data is used, accessed and the device used to access data

## Cloud data control

- Once you have the complete visibility of cloud data, we ensure data security as per the organizational requirements. These cloud data controls constitute
- Data Classification
- Data Loss Prevention (DLP)
- Managing File/Folder permissions
- Cloud Data Encryption

## Accessibility

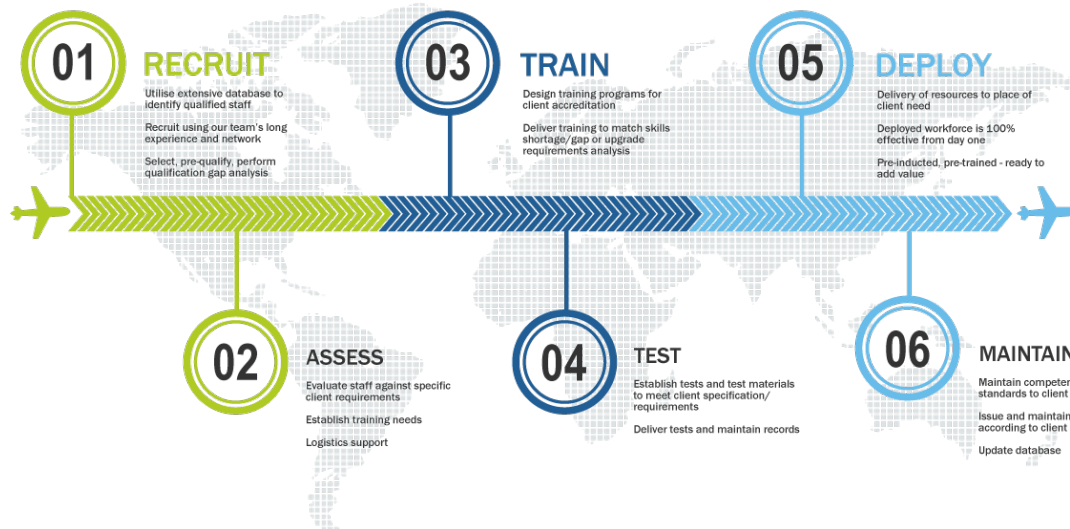

- We exercise Accessibility Controls for nullifying the effect of accessing data from any device or location. Mainly the accessibility controls are practiced for
- User Access
- Device Access
- Atypical Actions Identification
- Malware Prevention
- Privileged Access

## Compliance

- Cloud contains data and applications and for ensuring its safety and adherence to the risk management process, we constantly revoke compliance standards. Zindagi does
- Risk Assessments
- Compliance Assessments

# Engagement Avenues

- **Avenue 1 - Fixed Price Projects**
  - We can engage with you on specific projects at fixed cost for agreed scope or in FTE model. We have significant experience on working with clients on the projects like New ServiceNow Application/module implementation, Integration Frameworks, Orchestrations, Custom application developments etc.
- **Avenue 2 - Time & Material Agile Development**
  - Our developers can augment your existing team or take discrete requirements and work on them in stand-alone mode. This could be also done in FTE or P\*Q model.
- **Avenue 3 - Support Team for BAU Activities**
  - We can also undertake BAU activities for SN (L3). We can also engage with existing teams to provide L2 BAU support to client under your team's guidance
- **Avenue 4 - Consultancy for Version Upgrades/Deployments**
  - If necessary, we can manage an upgrade to allow your existing team to focus their ongoing project activities. Provide resources for new deployment projects

# Train and Deploy

At Zindagi, we can combine capabilities of our Recruitment and Technical training divisions to source the right people for Cloud Build and Operate models and ensure their training in Public Cloud, Hybrid Cloud, DevOps and SecDevOps needed for the work and seamlessly deploy them at client locations.

# TAD – Detailed Scope

## Recruit

Zindagi will recruit 1-2 years IT experience resources, who would have strong DevOps skills. Mandatory skills will include Linux expertise, and strong scripting skills. Other preferred skills will include PHP/Python development experience, Network protocols, Configuration Management.

## Assessment

Our senior consultants would assess each candidate on pre defined parameters to see if they fit the purpose and are ready to get trained on Cloud according to their aptitude. We can also include client specific tests and assessment if required.

## Train

More on next slide

## Certification

We will minimum aim at providing all our trained resources to get “AZ-103 Azure Administrator Associated Certified” as well as clear the ITIL foundation certification before placing them. We can also train and get them certified in some other micro certification if the client requires.

## Deployment Time

We estimate varied time from a minimum of 3 months to a maximum of 5 months depending on the candidate and his prior experience to be ready for deployment to the client

# TAD – Training Approach

In-house full time trainer focusing on Cloud and DevOps essentials to get the candidates to a level where they can be certified.

Trainees get real life scenarios to work on which are assessed by our existing architects and feedback is looped to the trainer.

The training touches on multiple aspects of cloud concepts including but not limited to Architecture, Design, Configuration, Compliance, Governance, Monitoring, Administration, Auditing.

We can make certain additions to default Azure Administrator training, let's say include training on integration with third party market place apps such as Cisco CSR1000v routers, Cohesity backup appliances, etc.

If client requires other modules then we will have to see how we can get those trainings done. Plus the certifications are quite expensive for those modules.

# TAD - Advantages to the client

Initial selection as per client requirement (Cloud Admin & Devops requirements )

Easier to plan the resourcing for upcoming projects and prepare resources accordingly.

Save time, effort and costs in

- HR Hiring - Campus, Interviews, selection etc.
- Resource On-boarding - Initial 6 months of internship
- Training - Trainer, courses selection, facilities etc.

Selection of ready resources based on criteria defined by client. (SRE, DevOps, NetOps, SecOps, etc.)

Permanent hiring can be done after 6 months - Success criteria is guaranteed vs normal hiring

Extending or removing the contract position is at client's discretion (Investment in PIP not required)

Flexibility of training the resources during the contract in other modules.

Involvement of client during training and during assessments as well to put extra checks on the quality.

# Competency Matrix – Cloud Use Cases

Cloud Skill	Experience Level	Technical Expertise Level	Process Expertise Level
